FREE ON-SITE NETWORKING SURVEY: THE BASIC SURVEY

The demand for affordable and efficient technology has never been greater. As the effects of a dated infrastructure are becoming more noticeable and affecting productivity, the need for scalable, future-proof networks is increasing.

IT decision-makers face unique challenges, such as extensive grounds, multiple buildings and numerous users. With the BYOD trend growing increasingly more popular, it's more important to have a reliable and efficient IT infrastructure in place – can your network support these issues?

Cost-saving is at the top of every IT agenda. Businesses must demand affordable, reliable and scalable solutions from their technology spending.

NETGEAR is offering a FREE, no obligation on-site networking survey, assessing wireless and storage needs in hotels, schools, businesses and other establishments, aiming to solve network issues or improve the infrastructure.

If you are interested in having a free networking survey at your site, please contact us at the email address below, or give us a call.

THE SURVEY

The survey will be conducted by an experienced pre-sales engineer. It will include:

- Examination of networking infrastructure, including assessment of wireless network and data storage facilities
- Wireless signal testing
- Assessment of network security
- Detailed report, highlighting any issues and documenting recommendations

SURVEY RESULTS

Customers will be presented with a report detailing:

- A review of the current network, highlighting possible issues and trouble spots
- Recommendations for network and storage improvements
- Detailed solution proposal, including location and quantity of devices
- Network diagram (if required)
